

Sirs, I have been informed of the NAB's petition 04-160 to limit satellite radio's ability to broadcast traffic and weather information. I am opposed to this since it is a service I am paying for. I would like to see it's availability increased to cover even more areas.

I would also like to see the variety of programming increase even more. To me, satellite radio is very comparable to satellite/cable television, and I should be able to receive programming I have paid for as long as it is not illegal or offensive. I urge you to reject the NAB's petition 04-160, and instead encourage the development of this and other technologies.
